BRAYAN MUÑOZ

Systems Engineer · Software Developer (Python, JavaScript, SQL) · LLM & RAG Applications

Barranquilla, Colombia · brayanmunioz6@gmail.com · +57 311 585 1187 · LinkedIn · github.com/Brayan744

SUMMARY

Systems Engineer (Universidad del Magdalena, 2026) whose thesis, awarded **Meritorious Distinction**, was an AI conversational assistant built with LLMs and Retrieval-Augmented Generation (RAG). Freelance developer delivering end-to-end software for small businesses in Python, JavaScript/TypeScript and SQL. Experienced in testing and validating AI-generated answers, writing clear technical documentation and following detailed specifications. **Native Spanish speaker (Colombian / Latin American)** with professional working English (B2).

EXPERIENCE

Freelance Software Developer & IT Solutions Consultant *Jul 2025 – Present*

Barbershop Appointment Booking System · Nov 2025 – Present

- Replaced manual scheduling with an automated booking system that lets customers manage their own appointments, cutting time spent answering messages.
- Gathered requirements with the owner, designed the relational data model, developed and tested the solution, and trained the end user.
- Sold the solution and provide ongoing support, bug fixes and new features as the business evolves.

Neighborhood Store Sales & Inventory System · Jul 2025 – Dec 2025 (+ ~3 months support)

- Built a system to centralize product records, track inventory in real time, manage sales and register electronic payments (Nequi and bank transfers).
- Designed the database and business logic to give full traceability of stock, sales and payments, reducing operational errors.
- Owned the full lifecycle: client discovery, analysis, development, functional testing, deployment, user training and post-release fixes.

AI & ACADEMIC PROJECTS

AI Conversational Assistant with RAG — Thesis, Meritorious Distinction *2025 – 2026*

- Developed a RAG-based chatbot using LLM APIs to answer academic questions from multiple institutional data sources integrated via REST APIs.
- Designed the document-processing and retrieval pipeline; wrote prompts and iterated on them to improve answer quality.
- Tested model responses against source documents for factual accuracy, relevance and hallucinations; documented technical and functional design and ran integration tests.

Tennis Tournament Management Database (Course Project) *Universidad del Magdalena*

- Designed a relational database in SQL and optimized queries for tournament, player and match management.

EDUCATION

B.S. Systems Engineering — Universidad del Magdalena *2021 – 2026*

Technical Degree, Computer Systems Assistant — Institución Universitaria ITSA *2020*

TECHNICAL SKILLS

Programming	Python, JavaScript, TypeScript, SQL, Kotlin
Web & APIs	Node.js, Angular, REST APIs, JSON, XML, web scraping
Databases	MySQL, SQL Server, relational data modeling, query optimization
AI / LLMs	Generative AI, RAG, prompt engineering, LLM API integration, response evaluation (ChatGPT, Claude, Gemini)
Automation	n8n, Power Automate, ETL, workflow design, conditional logic and validations
Tools	Git, GitHub, Postman

STRENGTHS

Code review and debugging · Clear technical writing · Fact-checking and attention to detail · Following detailed guidelines · Requirements analysis · Explaining technical topics to non-technical users · Fast learner

LANGUAGES

Spanish: Native (Colombian Spanish, Latin American Spanish) · **English:** B2 – Upper-Intermediate (professional working)
